Preferred Sample Submission:			
2 or more secondary wing feathers per bird (minimum of 2 - freshly pulled).			
Smaller feathers (ie chest feathers) are acceptable, but we will need 10 or more per bird as there is much less DNA in the quill tip of these feathers. Keep in mind that the smaller feathers are also much more time consuming and difficult to extract, so there may be a slight increase in the amount of time to get results.			

Place a check mark in the desired test columns for each sample.
